

INTRAVASCULAR THERAPIES
Peripheral Venous Catheter

lifecath midline

Value Life

An alternative to IV cannulas

lifecath midline is a long peripheral IV catheter, intended for patients requiring intravenous therapy up to 4 weeks¹ or more if necessary: lifecath midline is made of biostable polyurethane.

Designed to be placed in a peripheral vein of the arm, preferably above the ante-cubital fossa, to deliver low irritant solutions (Osmolarity ≤ 900 mOsm/l), antibiotics or pain killers. The distal end of the catheter should sit in the upper arm / Axillary vein.^{1,2}

Patients & caregiver benefits

- Long stay catheter allowing uninterrupted therapy¹
- Decreased risk of accidental needlestick injury¹
- No multiple cannulation attempts, the patient's veins are preserved¹
- The catheter remains entirely in a peripheral vein, there is no need for a control X-Ray¹

griplok® security

Specifically designed for stable and comfortable securement

Measuring tape

To estimate the catheter length to insert

	Catheter					Introducer or peelable cannula Ø	Codes

* catheter with reversed marking (0 at distal tip and 20 on the wings)

MST kits includes:

- 1 polyurethane radiopaque catheter with Robert clamp, stylet and T connector
- 1 echogenic safety puncture needle 21G, 7 cm length
- 1 syringe, 10 ml
- 1 straight Nitinol guidewire with advancer 0.018" (0.46mm), 50 cm length
- 1 peelaway introducer, 7 cm length
- 1 safety scalpel
- 1 or 2 **bionector**
- 1 **griplok**
- 1 measuring tape
- 1 label marked "Midline"
- 2 traceability labels

Kits with Peelable cannula include

- 1 polyurethane radiopaque catheter with Robert clamp, stylet and T connector
- 1 peelaway short IV cannula introducer (3.2cm)
- 1 or 2 **bionector**
- 1 **griplok**
- 1 measuring tape
- 1 label marked "Midline"
- 2 traceability labels

All product are packed in box of 10 units.
