

Endomed 182

Favourable priced
professional device for
Interferential Current (IFC)
and TENS

Endomed 182 for IFC and TENS

The Endomed 182 is a mains-powered, 2-channel electrostimulator for pain management offering the following current wave forms:

- 2-pole Interferential Current (IFC)
- 4-pole/tetrapolar Interferential Current (IFC)
- 4-pole IFC with Isoplanar Vector
- Asymmetric Biphasic Pulsed Current (TENS)
- Burst TENS

Endomed 182 for IFC and TENS

Smart design, smart performance!

The Endomed 182 is the new generation of physical therapy devices. Its advanced software design is smart in its features, functions and usability. The result is a device that empowers therapists to offer extraordinarily versatile treatment options to patients, with an exceptionally clever way of operating the device.

2 Independent channels

Settings for 2-pole Interferential Current (2-pole) and TENS can be equally distributed through two channels (four electrodes), while the intensity of each channel can be individually adjusted.

Full color touch screen and graphic interface

The Endomed 182 is equipped with a full colour touch screen and graphic user interface that provide the user with perfect control and a clear overview of the selected parameters during treatment.

Favourable priced professional device
for Interferential Current (IFC) and TENS

Endomed 182 for IFC and TENS

Easy to use

The Endomed 182 is simple to use and a pleasure to navigate, thanks to Quick Access buttons and Smart buttons that guide you through the clinically correct functions of the device and each treatment.

Store your favourites

In addition to manual mode, in which treatment parameters can be set and adjusted by the operator, all treatment parameters can be saved as favourites (personalised settings), thus offering a clear reference for future therapy sessions.

Clinical protocol library

The Endomed 182 for IFC & TENS also offers 16 pre-set clinical protocols. The clinical library illustrates an array of pathologies and anatomical images, making it easier for you to communicate with patients about their condition and educate them on further treatment options, while ensuring a safe and effective treatment. All pre-programmed clinical protocols can be easily launched in just a few steps.

Endomed 182 for IFC and TENS

Interferential with isoplanary vector

When selecting this function, the total area between the 4 electrodes is optimally stimulated and electrodes can be positioned quickly and easily. Isoplanar Interferential can be used for the treatment of disorders that involve a large treatment surface area of diffuse pain. Isoplanary Interferential is also used as a mild pre-treatment. After this application, the treatment session is continued with a focus on a smaller, more localised area.

Endomed 182 with integrated vacuum

The Endomed 182 can be equipped with an integrated vacuum module. The vacuum (suction) generated enables the therapist to easily position the stimulation electrodes on the patient and eliminates the use of fixation straps. Stimulation is applied by means of suction cups that have integrated electrode surfaces to transfer the electrostimulation onto the target tissue via moistened sponges.

Versatile

With 2 available device models, electrostimulation can be applied through flexible rubber electrodes, self-adhesive electrodes and/or vacuum electrodes.

In short: the Endomed 182 for IFC & TENS:

- Are the most favourable priced professional devices for Interferential Current (IFC) and TENS
- Have 2 independent channels
- Are smart in terms of design and performance

Smart in Design,
Smart in Performance

Endomed 182 for IFC and TENS

TECHNICAL SPECIFICATIONS

Mains voltage	100 - 240 Volt
Frequency	50/60 Hz
Max. power output	50 VA
Dimensions Endomed 182 1634901 (WxLxH)	14x16x14 cm
Weight Endomed 182 1634901	1460 gr
Dimensions Endomed 182 1634902 (WxLxH)	14x22.5x17.5 cm
Weight Endomed 182 1634902	2750 gr
Channels	2
Output	Constant Current
Intensity	0 - 100 mA
Timer	0 – 60 min
Current wave forms	Interferential (IFC) and Biphasic Asymmetric Pulsed Current (TENS)
Pre-programmed clinical protocols:	16
Favourites	store up to 20 favourites

This is a medical device.

It complies with all applicable medical regulations. For more details please consult the instructions for use (downloadable via www.enraf-nonus.com).

Endomed 182 for IFC and TENS

TECHNICAL SPECIFICATIONS

Interferential current

Carrier wave	4 kHz
AMF frequency	1 – 200 Hz
Modulation frequency	0 – 180 Hz
Modulation programs	1-1, 6-6, 1-30 sec

Asymmetrical biphasic pulsed current (TENS)

Pulse width	150 μ s
Frequency	1 – 200 Hz
Modulation frequency	0 – 180 Hz
Burst frequency	1 Hz, 2 Hz, 4 Hz

Endomed 182 for IFC and TENS

ACCESSORIES

Adhesive electrodes

3444222 Adhesive electrodes Ø 2,2 cm, 2 mm female, 10 sheets of 8 (also for EMG)

3444056 EN-Trode Ø 3,2 cm, 2 mm female, 10 sheets of 4

3444135 EN-Trode Ø 5,0 cm, 2 mm female, 10 sheets of 4

Endomed 182 for percutaneous electrolysis therapy

The Endomed 182 for percutaneous electrolysis therapy (PE) is a small unit exclusively ⁽¹⁾ for various forms of PE (such as EPTE[®] and EPI[®])

Percutaneous electrolysis is a therapy applying small galvanic currents, highly localized with electrode needles and supervised by ultrasound scanning. Recent research has shown that this application has very positive effects on especially tendon and ligament disorders.

In EPTE[®] a low galvanic current is applied for 80 to 110 seconds with 0.3 mA - 2.5 mA. In EPI[®] a higher current is used in shorter intervals, that is 3 × 3 seconds with 3 mA. The Endomed 182 is a complete device for PE, it allows for all of these therapeutical methods!

(1) To be able to apply percutaneous electrolysis therapy, an ultrasound scanning device, electrode needles and application knowledge of percutaneous electrolysis therapy are indispensable. Enraf-Nonius only supplies the hardware to generate the galvanic current.

Endomed 182 for percutaneous electrolysis therapy (article number 1634903) generates galvanic currents only, not any other electrotherapeutical mode (like Interferential Current (IFC) or TENS).

Endomed 182 for percutaneous electrolysis therapy

About the device Endomed 182 for PE:

- EPT[®] and EPI[®] in one device
- Easy to set intensity and duration
- Storage space for 20 presets
- Current intensity adjustable from 0 mA - 15 mA
- Duration adjustable from 0 sec - 300 sec
- MiliCoulomb (mC) counter - this makes the charge (the electrolytic effect) visible
- Very easy to operate by means of a full color touch screen
- Equipped with smart buttons that allow for quick adjustments
- Audio feedback
- Compact and lightweight

About the needle holder of the Endomed 182 for PE:

- Start / stop therapy button
- Simple, fast and safe needle grip mechanism
- Ergonomic design
- Comfortable grip

Important: For safety and effectiveness, product purchase is only allowed for physiotherapists with certification, for the professional use of percutaneous electrolysis therapy. They should have completed at least a training in percutaneous electrolysis, or an equivalent training. Galvanic currents can, by its nature, damage the tissue. So thorough background and application knowledge is important. That particular knowledge should cover dosing the galvanic current and the localisation of it with the aid of ultrasound.
